cubicle curtain system

privex

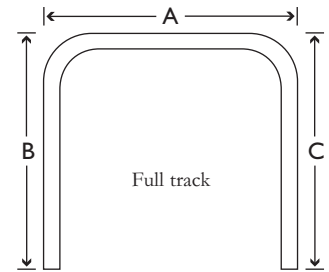

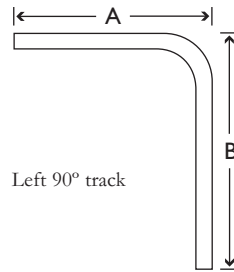

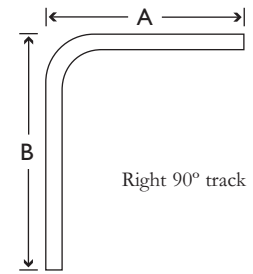

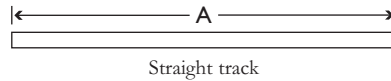

Stance Healthcare's Privex cubicle curtain system is made up of 3 basic components: Track, Carriers, and Curtain.

Together these 3 components create an attractive, clean and functional curtain system that is in keeping with our overall company objective: the creation of quality products that provide solutions for today's healthcare market concerns.

Rigid aluminum track design allows carriers to travel easily, eliminating that extra bit of coaxing commonly experienced with cubicle curtains.

Privex curtains are constructed from 100% flame-resistant polyester meeting NFPA 701 requirements, and California code 19 requirements for vertical flammability.

Layout options:*

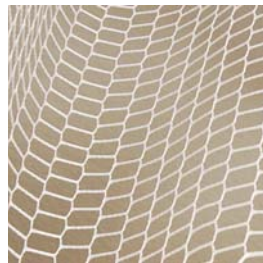

*As looking down from above.

features:

Simple, but functional track and carrier design

Standard nylon webbing ensures strength, ventilation and light flow

Privex curtain material meets NFPA 701 and California code 19 flammability requirements
