

overbed table

overbed table

Designed to complement Kindred series room furnishings, our overbed table combines heavy-duty construction with attractive, functional design.

Tabletop raises when slight upward pressure is applied, then locks into any one of 15 locking positions. This provides the user with a range of heights to choose from, between 30" and 44".

Top is lowered by means of a conveniently located trip lever.

Our unique thermoformed top provides a certain softness, both in appearance and feel. This thermoformed top also eliminates bacteria-collecting edge laminate and features a recessed surface for spill containment.

Column and base are constructed with 14 gauge steel available in 3 finish choices: black or almond powdercoat; or chrome plated.

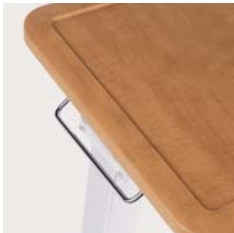

Model ST160
